PROFESSIONAL SUMMARY

Robotics & AI undergraduate with hands-on experience in Python, SQL, database-backed applications, data analysis, and machine learning. Skilled in data processing, KPI reporting, backend development, and analytical problem-solving, with experience building AI-powered applications and automated data workflows.

EDUCATION

Thapar Institute of Engineering and Technology, Patiala, Punjab — Aug 2023 – Present
B.E. in Robotics & Artificial Intelligence — CGPA: 8.28/10

EXPERIENCE

Research Intern, Thapar Institute of Engineering and Technology, Patiala, Punjab — Jun 2026 – Present

- Built a multimodal AI platform integrating 1,205 maternal clinical records and fetal brain ultrasound images for pregnancy-risk prediction.
- Trained ResNet-18 for image analysis and Gradient Boosting for tabular prediction, achieving 97.7% recall for the image model and 99.0% accuracy with 0.9996 AUC for the tabular model.ABO
- Applied patient-level train/test splitting to reduce data leakage, and used SMOTE and augmentation to address class imbalance.

Data Analytics Job Simulation, Deloitte (Forage Virtual) — Completed

- Analyzed structured datasets in a data analytics and forensic technology simulation and built an interactive Tableau dashboard to communicate findings.
- Used Excel to classify data, identify patterns, and support evidence-based business conclusions.

PROJECTS

PayPulse – Incentive Compensation Analytics Platform | Python, SQL, FastAPI, Streamlit | GitHub

- Built a SQL-backed analytics platform processing 1,800+ records, replacing manual spreadsheet payout processing with automated KPI analysis and anomaly detection.
- Developed FastAPI services and interactive Streamlit dashboards to visualize payout trends, flag anomalies, and generate reports.

AI-Powered Pregnancy Risk Prediction Platform | Python, TensorFlow, React, Flask| **IEEE InCoWoCo 2026** | GitHub

- Built a multimodal system combining maternal clinical data and fetal ultrasound images; the Gradient Boosting model achieved 99.0% accuracy and 0.9996 AUC.
- Developed a React and Flask application for automated model inference.

Agentic RAG Evaluation Framework | Python, LangChain, LLMs | GitHub

- Developed an automated framework to evaluate Retrieval-Augmented Generation (RAG) pipelines using Python and LangChain.
- Measured retrieval relevance, answer faithfulness, and response quality against structured benchmarks, and used prompt engineering to assess workflow reliability.

TECHNICAL SKILLS

Programming: Python, SQL, C/C++

Databases & Data Processing: MySQL, Database Design, Pandas, NumPy, Data Cleaning, Data Transformation, Structured Data Analysis

Data Analytics & Reporting: Exploratory Data Analysis, KPI Reporting, Anomaly Detection, Statistics, Tableau, Excel

Application Development: FastAPI, Flask, React, REST APIs, Streamlit

AI & Machine Learning: TensorFlow, ResNet-18, Gradient Boosting, Random Forest, Classification, Feature Engineering, SMOTE

Tools & Version Control: Git, GitHub, Jupyter

ACHIEVEMENTS & LEADERSHIP

- Research paper accepted at the 2026 International Conference for Women in Computing (IEEE InCoWoCo).
- Selected as an Open Source Contributor for GirlScript Summer of Code (GSSoC) 2026.
- Awarded the Merit Scholarship at Thapar Institute of Engineering and Technology three times.
- Core Member, MECIVIONS Research Society.
- Completed the Forage AI in Action Job Simulation (prompt engineering and AI workflows).check
